

## Express News Gardening Tasks

Distributed 01-03-2019

- In the vegetable garden plant onion transplants, broccoli transplants, cabbage transplants and lettuce, carrots, radishes and English peas by seed.
- If you have naturalized larkspur in your flower garden remove the seedlings that will interfere with the development of stocks, snapdragons, dianthus, calendula, and other winter annuals. The larkspur are tall growing and aggressive. Limit them to a designated part of the garden.
- It is an excellent time to plant shade trees and shrubs. Select one or more of the well-adapted species of shade trees on the CPS Shade Tree Rebate list and you may qualify for a \$50 shade tree rebate.
- Rescue grass is the lush grass that is growing on many shaded winter lawns. It is easiest to control by applying preemergent herbicide in early September. Control it now by mowing. It makes an attractive winter lawn that does not require irrigation.
